

How to use NoMachine for a remote desktop access

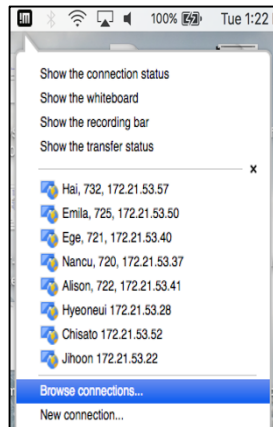

NoMachine

Enables a remote desktop access to a remote VM from your local laptop computer.

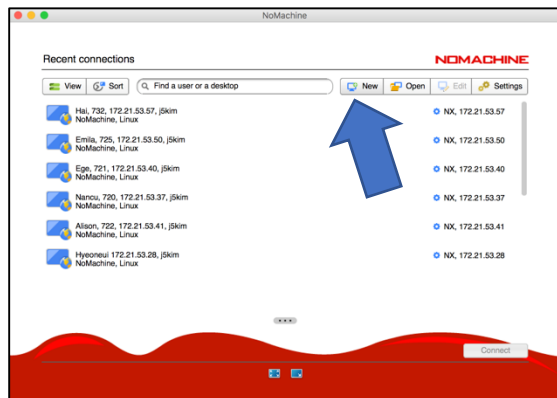

1. Open a browser to visit NoMachine web-site (<https://www.nomachine.com/download>), download NoMachine software, and install it on your computer.

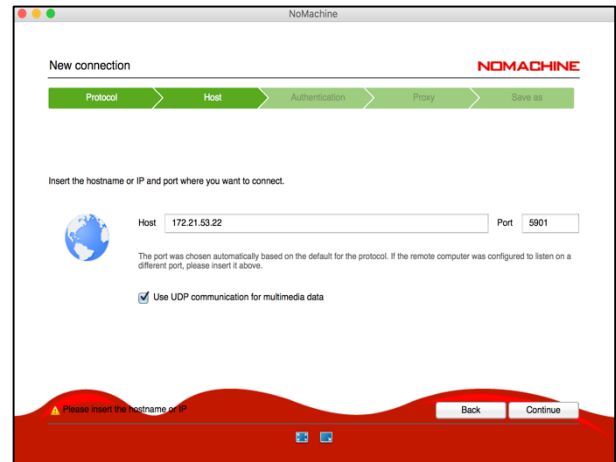

2. Start NoMachine and select 'Browse connections...'

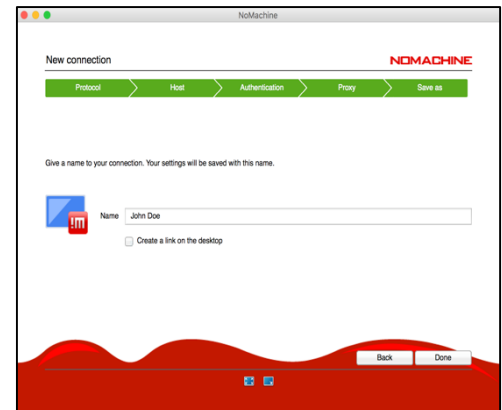

3. Click 'New' to add a new connection.

4. Select a Protocol 'NX', and type in IP address '172.xx.xx.xx' of your VM in 'Host' and a Port '5901'

5. Select an authentication method 'Password', an HTTP proxy 'Don't use proxy', and give a name to this connection. For example, 'John Doe'.

6. Run AnyConnect to establish VPN connection. Then double click a VM connection (or select & click **Connect** button). User UCSD AD username and RSA app passcode in your smartphone.
